

FAQ for metadata re-curation in the Texas Data Repository

I don't remember publishing any datasets in TDR, why am I receiving this email?

When datasets are published in TDR, the depositor has the ability to designate someone else as the contact person for the dataset. All email recipients being contacted in this re-curation process are listed as a contact person for at least one dataset.

Are all datasets being modified?

If you are receiving this email, your dataset is slated for re-curation. If you have multiple datasets in TDR, some or all of the datasets may be re-curated.

Is this process optional?

No, the changes being made are regarded as unambiguous improvements to datasets (e.g., adding standardized affiliations where none previously existed). These changes are permitted under section 3.4 of the [Terms of Service](#).

Do I need to do anything for this process?

No action is required on your part. However, the system will automatically send an email notification that your dataset has been published once it has been updated; if you have many datasets undergoing re-curation, there will be many emails (sorry, we tried to see if there was a way to turn this off).

Are my data files being affected by this process?

Neither the availability nor the contents of the files are being altered or affected by this process.

Is new metadata being generated *de novo* for my dataset?

No, additional metadata is not being generated. For example, if a dataset does not have any keywords at present, none are being added to it. However, verifiable connections (e.g., to your ORCID or to a related article) may be added.

Is the DOI for my dataset going to change?

No, the DOI for your dataset will remain the same.

Will the dataset remain live during re-curation?

Yes, the availability of the dataset will not change during re-curation.

Will there be any indication that these edits were made?

Yes, the dataset will be treated as having undergone a 'minor version' change which will be reflected under the 'Versions' tab on the dataset landing page.

Who developed this process?

This re-curation process was developed by Dr. Bryan Gee, the Research Data Coordinator at the University of Texas at Austin and one of the institutional liaisons for TDR. Bryan has previously conducted curation and re-curation of thousands of datasets in the Dryad Digital Repository and developed this process for TDR.

Additional questions? Please email Bryan at bryan.gee@austin.utexas.edu
